OECD Centre for
Entrepreneurship, SMEs,
Regions & Cities
Deputy Director

The global Metals & Mining sector has a foundational role to play in a world increasingly reliant on low carbon energy solutions.

In addition to the sector's fundamental contribution to the economy and society, there is an expanding need for certain metals to be used as vital precursors in the electrification supply chain.

Given the expanding role of the sector in a 21st century low carbon arena, tangible, and transparent performance on Net Zero, ESG, and Corporate Purpose will become table stakes.

Stand-out performance on Sustainability will be a catalyst for competitiveness, long-term survivability, and market success.
