Corporate Purpose *Energy Transition* **METALS & MINING**

September 28, 2023
4 hour livestream - 9 AM ET

ENABLING THE ENERGY TRANSITION

The global Mining and Metals sector has a foundational role to play in a world increasingly reliant on low carbon energy solutions. In addition to the sectors' fundamental contribution to the economy and society, there is an expanding need for certain metals to be used as vital precursors in the electrification supply chain. Given the

expanding role of the sector in a 21st century low carbon arena, tangible and transparent performance on Net Zero, ESG and Purpose will become table stakes. Stand-out performance on Sustainability will be a catalyst for competitiveness and long term survivability. What will it take to get there?
